

GirShield Screenshots

A visual walkthrough of the GirShield AI platform — an agentic AI system for predicting wildlife movement and protecting communities around Gir Forest.

1. Sign In Page

The authentication screen, presented as a split layout. The left panel carries GirShield's branding and headline platform stats (villages protected, average response time, animals tracked, AI accuracy). The right panel holds the “Welcome back” sign-in form with email/phone and password fields, a “Forgot password?” link, listed demo credentials for each role, and a link to register.

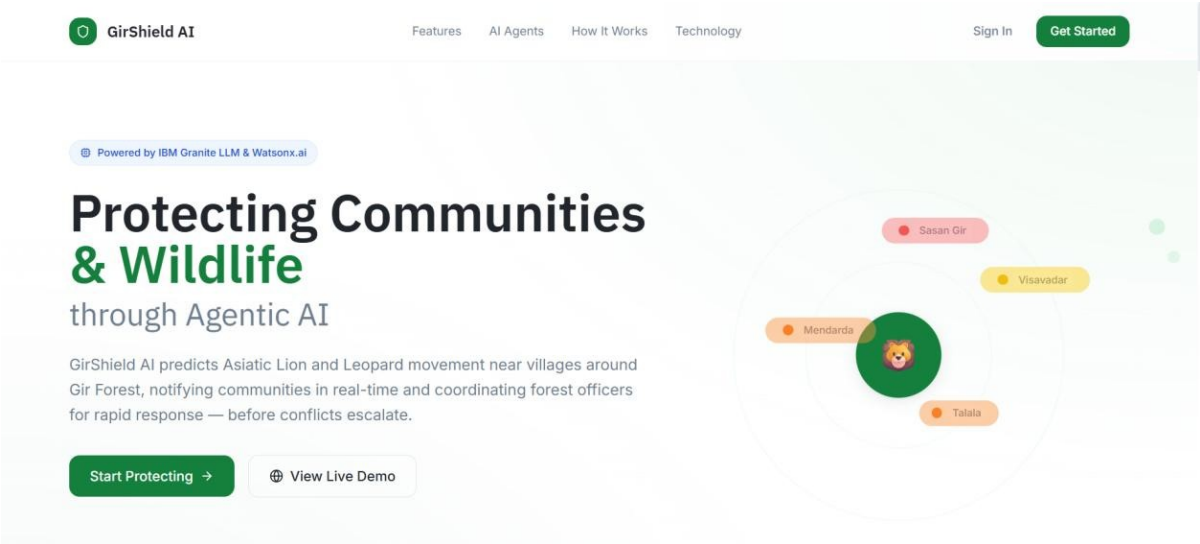

2. Home Page

The public landing page, shown here in its full scrolling sequence from top to bottom.

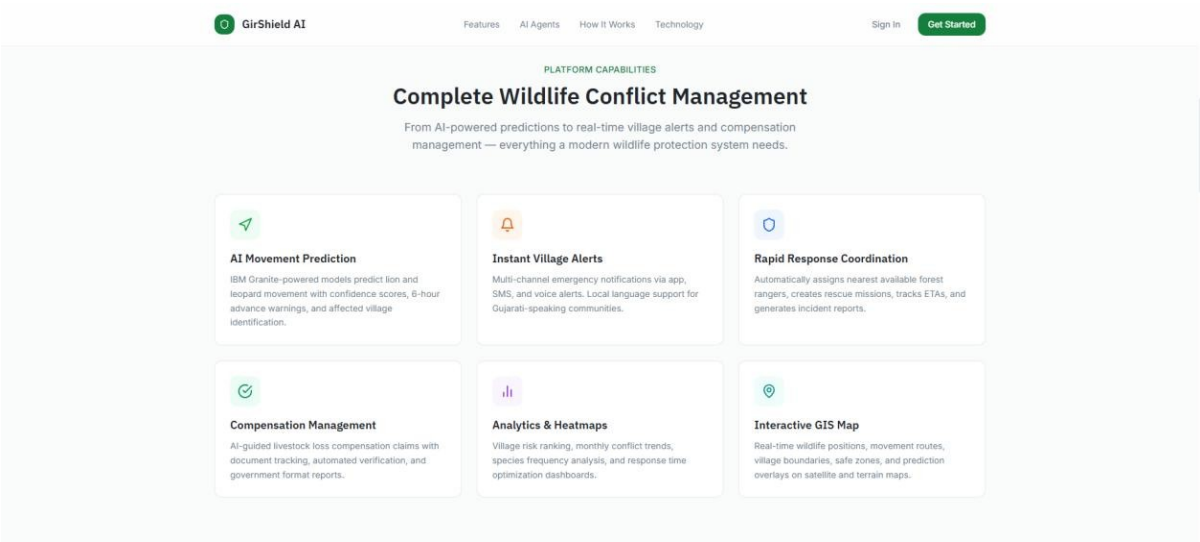

2.1 Hero Section

The top of the home page, headlined “Protecting Communities & Wildlife through Agentic AI.” It introduces GirShield AI’s core purpose — predicting Asiatic Lion and Leopard movement near villages around Gir Forest — alongside a live map preview and “Start Protecting” / “View Live Demo” call-to-action buttons.

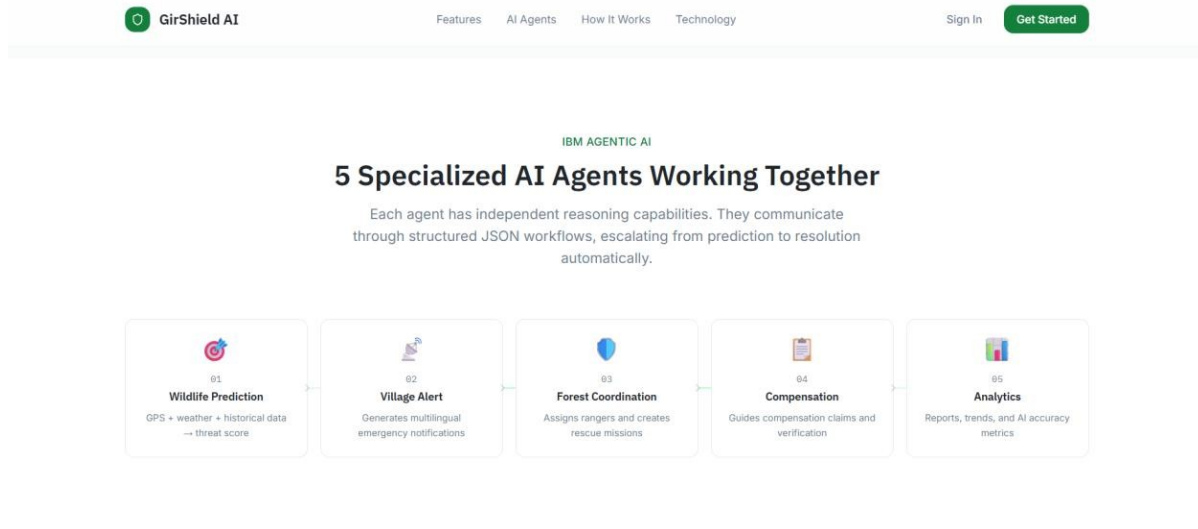

2.2 Platform Capabilities

The “Complete Wildlife Conflict Management” section, listing the platform’s six core capabilities: AI Movement Prediction, Instant Village Alerts, Rapid Response Coordination, Compensation Management, Analytics & Heatmaps, and the Interactive GIS Map.

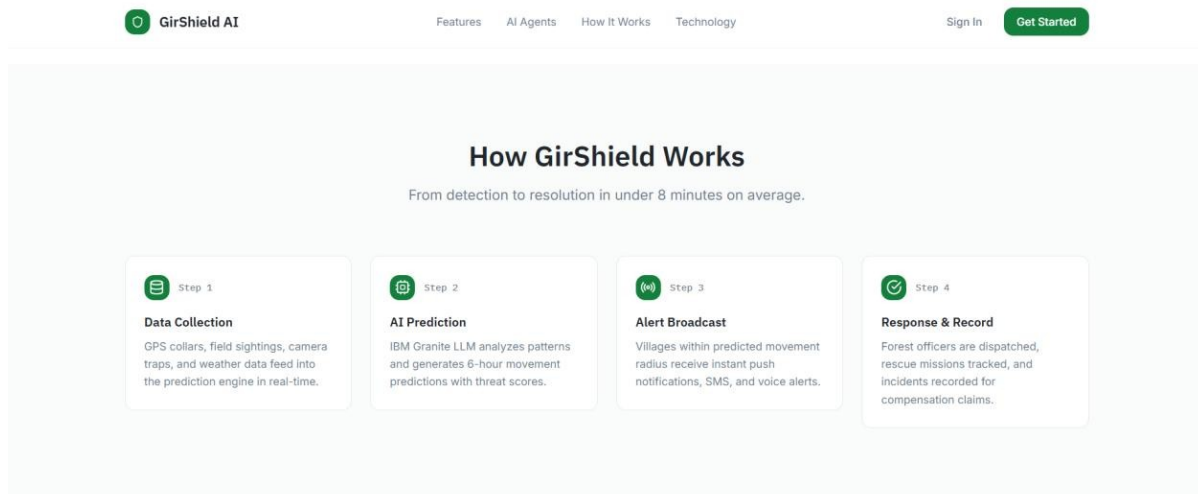

2.3 AI Agents Overview

The “5 Specialized AI Agents Working Together” section, describing the independent agents — Wildlife Prediction, Village Alert, Forest Coordination, Compensation, and Analytics — that communicate through structured JSON workflows from prediction to resolution.

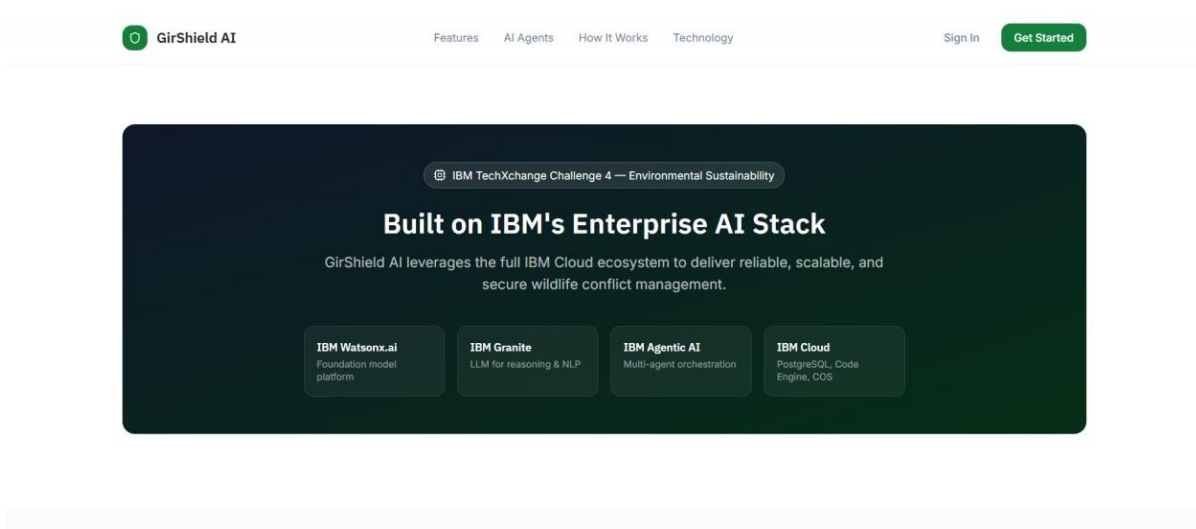

2.4 How GirShield Works

A four-step process overview — Data Collection, AI Prediction, Alert Broadcast, and Response & Record — explaining how the platform moves from detection to resolution in under eight minutes on average.

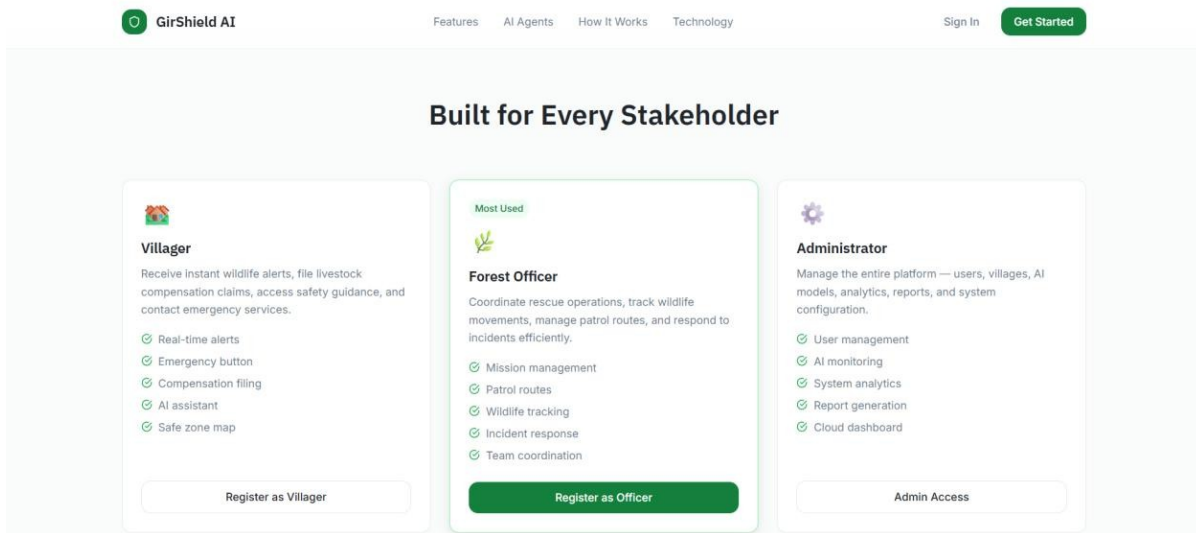

2.5 Technology Stack

The “Built on IBM’s Enterprise AI Stack” section, highlighting the IBM technologies powering the platform: IBM Watsonx.ai, IBM Granite, IBM Agentic AI, and IBM Cloud, alongside a badge for the IBM TechXchange Challenge 4 — Environmental Sustainability.

2.6 Stakeholder Roles

The “Built for Every Stakeholder” section, comparing the three account types — Villager, Forest Officer, and Administrator — with each role's key permissions and a matching registration button.

2.7 Call to Action & Footer

The closing “Ready to Protect Your Community?” call-to-action banner with “Get Started Free” and “Sign In” buttons, followed by the site footer with Platform, Roles, and Resources link groups.

Ready to Protect Your Community?

Join the growing network of villages and forest officers using GirShield AI to prevent human-wildlife conflicts in Gir Forest.

3 Select Role

Choose your role

How will you use GirShield?

**Villager**
I live near Gir Forest and want wildlife alerts

→

**Forest Officer**
I am a forest department officer

→

**Administrator**
I manage the GirShield platform
